

DOCKER ARCHITECTURE

Component Connection Diagram - for Docker Notes

Client - Daemon commands Compose orchestration Hub push / pull Registry push / pull Hub - Registry sync Compose - Client (CLI)

// COMPONENT REFERENCE

COMPONENT	ROLE	KEY COMMANDS / NOTES
Docker Client	Sends user commands to the Docker Daemon via REST API or Unix socket.	docker build · docker run · docker pull · docker push
Docker Daemon	Core engine (dockerd). Manages containers, images, volumes, networks. Responds to Client API calls.	Runs as background service · exposes /var/run/docker.sock
Docker Compose	Reads docker-compose.yml to define and run multi-container applications.	docker compose up · docker compose down · docker compose build
Docker Hub	Official public cloud registry hosted by Docker Inc. Millions of public images available.	docker pull nginx · docker push user/image:tag · hub.docker.com
Docker Registry	Self-hosted private registry for storing images within an org or locally.	docker run -d -p 5000:5000 registry:2 · configurable with TLS & auth
